

Stages in Division

Division – Early stages (EYFS)

Children will engage in a wide variety of songs and rhymes, games and activities. In practical activities and through discussion they will begin to solve problems involving halving and sharing.

Share the apples between two people.

‘Half of the apples for you and half of the apples for me.’

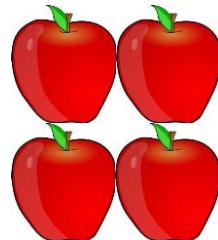

Division - Year One

Solve one-step problems involving division by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher.

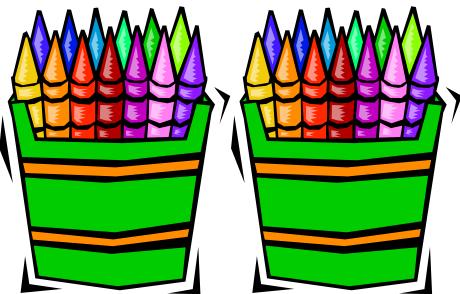

Count in multiples of twos, fives and tens (to the 10th multiple)

Children will start with practical **sharing** using a variety of resources. They will share objects into **equal groups** in a variety of situations. They will begin to use the vocabulary associated with division in practical contexts.

‘Share these eight apples equally between two children. How many apples will each child have?’

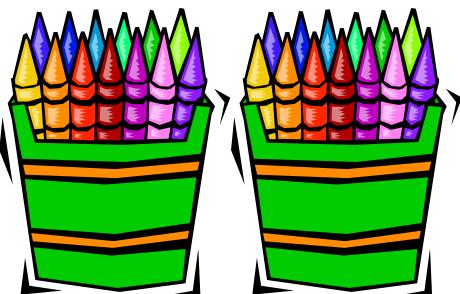

High Ercall Primary School Progression in Division.

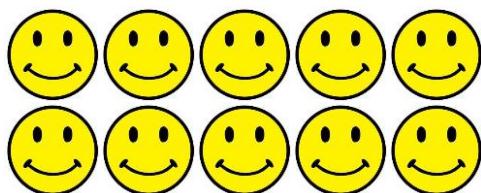

'Share 20 crayons between 2 pots.'
'How many crayons are in each pot?'

Children will move from sharing to grouping in a practical way

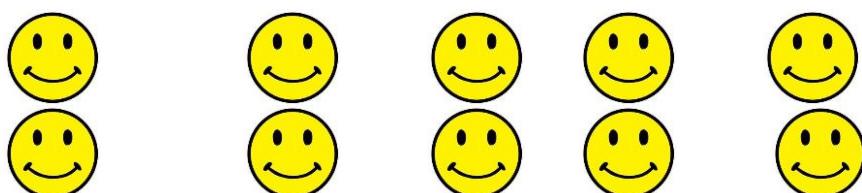

'Put 20 crayons into groups of 10. How many pots do we need?'

Use **arrays** to support early division

'How many faces altogether? How many groups of two?'

'Five groups of two'

'How many groups of 5?'

'10 shared equally between 2 people'

'Half of ten is five'

Continue to solve problems in **practical contexts** throughout Y1, and develop the language of early division, with appropriate resources.

Division - Year Two

Recall and use multiplication and division facts for the 2, 5 and 10 multiplication tables

Calculate mathematical statements for division within the multiplication tables they know and write them using the division (\div) and equals (=) signs

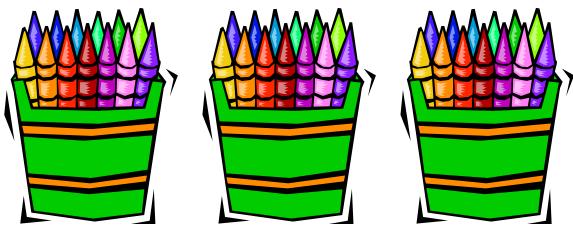

Solve problems involving division, using materials, arrays, repeated subtraction, mental methods, and multiplication and division facts, including problems in contexts

NB Ensure that children are confident with the methods outlined in the previous year's guidance before moving on.

Children will use a range of vocabulary to describe division and use practical resources, pictures, diagrams and the \div sign to record, using multiples that they know.

High Ercall Primary School Progression in Division.

Sharing and grouping:

$$30 \div 10 = 3$$

$$30 \div 3 = 10$$

'30 crayons shared equally between three pots.' (Sharing)

'We have 30 crayons and put ten crayons in each pot.'

How many pots do we need?
(Grouping)

'30 divided by 10 = 3'

'30 divided by 3 = 10'

'How many groups of 5?'

'15 shared equally between 3 people is...?'

'15 divided by 3 equals 5'

'15 divided by 5 equals 3'

$$15 \div 5 = 3$$

$$15 \div 3 = 5$$

Using arrays to support division

$$15 \div 5 = 3$$

$$15 \div 3 = 5$$

How many groups of 3?

How many groups of 5?

15 shared between 3 people is...?

15 shared between 5 people is...?

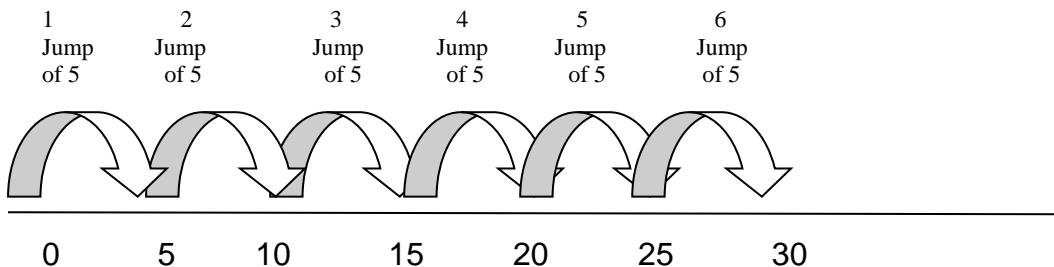

15 divided by 5 = 3

15 divided by 3 = 5

When children are ready, use an empty number line to count forwards:

$$30 \div 5 = 6$$

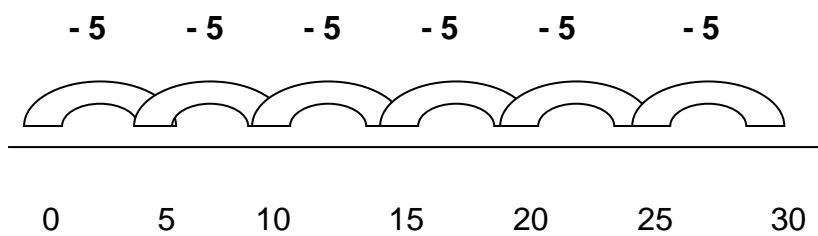

'How many jumps of five make thirty?'

Also jump back to make the link with repeated subtraction:

$$30 \div 5 = 6$$

'How many groups of five?'

NB If, at any time, children are making significant errors, return to the previous stage in calculation.

Year Three – Division

Recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables (continue to practise the 2, 5 and 10 multiplication tables)

Write and calculate mathematical statements for division using the multiplication tables that they know, including for two-digit numbers divided by one-digit numbers, using mental and progressing to a formal written method

NB Ensure that children are confident with the methods outlined in the previous year's guidance before moving on.

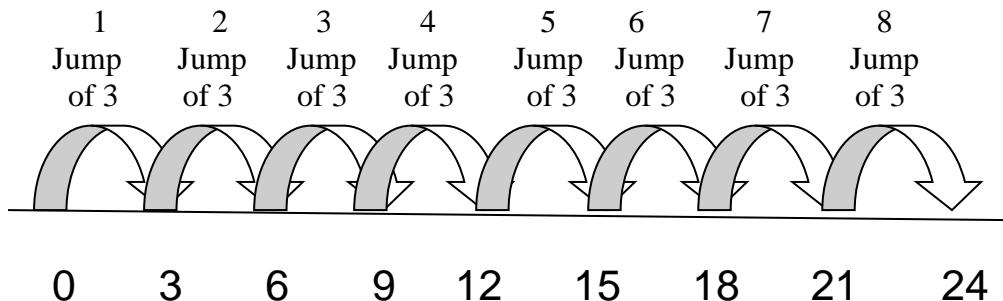

High Ercall Primary School Progression in Division.

Continue to use practical resources, pictures, diagrams, number lines, arrays and the \div sign to record, using multiples that they know, as appropriate (see Y2 guidance).

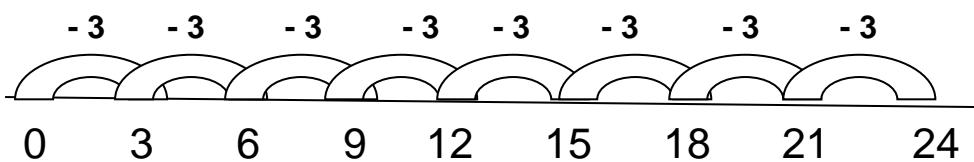

Using an empty number line to count forwards...

$$24 \div 3 = 8$$

'How many threes in 24?'

...also jump back from 24 to make the link with repeated subtraction.

'How many groups of three in 24?'

Introduce the formal layout using multiplication/division facts that the children know:

This can also be recorded as...

$$\begin{array}{r} 8 \\ 3 \sqrt{24} \end{array}$$

'Twenty four divided by three equals eight.'

'How many threes are there in twenty four?'

NB If, at any time, children are making significant errors, return to the previous stage in calculation.

Year Four- Division

Recall multiplication and division facts for multiplication tables up to 12×12

Use place value, known and derived facts to divide mentally

Divide two-digit and three-digit numbers by a one-digit number using formal written layout (not explicitly stated in the programmes of study but implied in the non-statutory guidance)

NB Ensure that children are confident with the methods outlined in the previous year's guidance before moving on.

Continue to write and calculate mathematical statements for division using the multiplication tables that the children know e.g.

$$32 \div 8 = 4$$

Continue using the **formal written layout** for division using multiplication tables that they know:

$$\begin{array}{r} 4 \\ 8 \overline{)32} \end{array}$$

'How many eights are there in thirty two?'

Continue using the formal written layout, introducing remainders:

$$25 \div 3 = 8 \text{ r}1$$

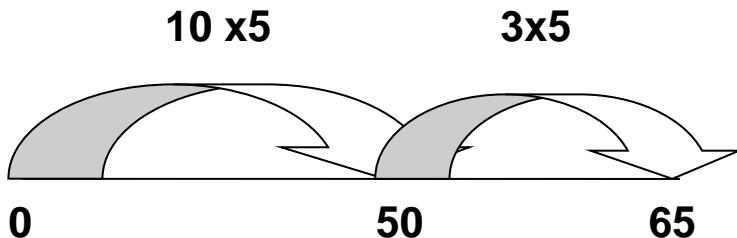

$$\begin{array}{r} 8\text{r}1 \\ 3 \overline{)25} \end{array}$$

NB Remainders are not specifically referred to until Y5 in the National Curriculum. However, this may be an appropriate point to introduce them using familiar multiplication facts.

High Ercall Primary School Progression in Division.

Continue to use **empty number lines**, as appropriate, using multiples of the divisor:

$$65 \div 5 = 13$$

Consolidate understanding of division as grouping.

Introduce children to a written method:

e.g. $89 \div 6 =$

$$\begin{array}{r}
 14\text{ r}5 \\
 6 \overline{)89} \\
 -\underline{60} \quad (\underline{10} \times 6) \\
 \hline
 29 \\
 -\underline{24} \quad (\underline{4} \times 6) \\
 \hline
 5
 \end{array}$$

$$89 \div 6 = 14 \text{ r } 5$$

Encourage children to estimate before calculating. Children will use informal pencil and paper method to support division. Children begin to develop a written method for $\text{TU} \div \text{U}$ (chunking method).

Children are to underline the divisor e.g. 14 r5.

Continue with written method, encouraging children to use fewer steps.

$$\begin{array}{r}
 32 \text{ r } 4 \\
 6 \overline{)196} \\
 -\underline{60} \quad (\underline{10} \times 6) \\
 \hline
 136 \\
 -\underline{60} \quad (\underline{10} \times 6) \\
 \hline
 76 \\
 -\underline{60} \quad (\underline{10} \times 6) \\
 \hline
 16 \\
 -\underline{12} \quad (\underline{2} \times 6) \\
 \hline
 4
 \end{array}$$

Encourage children to estimate before calculating. Children will use informal pencil and paper method to support division. Children begin to develop a written method to $\text{HTU} \div \text{U}$ with remainders.

This will lead into the formal written method of short division:

$$98 \div 7 = 14$$

$$\begin{array}{r} 1 \ 4 \\ 7 \overline{)9 \ 28} \end{array}$$

Use the vocabulary of place value to ensure understanding and make the link to partitioning.

Continue to practise the formal method of short division throughout Y4.

If children are confident develop further, by dividing three-digit numbers by a one digit number using the formal method of short division with whole number answers (no remainders).

NB If, at any time, children are making significant errors, return to the previous stage in calculation.

Year Five – Division

Divide numbers up to 4 digits by a one-digit number using the formal written method of short division and interpret remainders appropriately for the context.

NB Ensure that children are confident with the methods outlined in the previous year's guidance before moving on.

Continue to practise the formal written method of short division with whole number answers...

$$184 \div 8 = 23$$

$$\begin{array}{r} 2 \ 3 \\ 8 \overline{)1 \ 8 \ 4} \end{array}$$

Use the language of place value to ensure understanding.

Make the link to the partitioning method (see Y4 guidance).

...and with remainders:

$$432 \div 5 = 86 \text{ r}2$$

$$\begin{array}{r} 86 \text{ r } 2 \\ \hline 5 \quad | \quad 43 \text{ } 32 \end{array}$$

The remainder can also be expressed as a fraction, $\frac{2}{5}$ (the remainder divided by the divisor): $432 \div 5 = 86\frac{2}{5}$

Continue to practise, develop and extend the formal method of short division, with and without remainders. Interpret and express remainders according to the context.

NB If, at any time, children are making significant errors, return to the previous stage in calculation.

Year Six – Division

Divide numbers up to 4 digits by a two-digit number using the formal written method of short division where appropriate, interpreting remainders according to the context

Divide numbers up to 4 digits by a two-digit whole number using the formal written method of long division, and interpret remainders as whole number remainders, fractions, or by rounding, as appropriate for the context

NB Ensure that children are confident with the methods outlined in the previous year's guidance before moving on

Dividing by a two-digit number using a **formal method of long division**:

$$\begin{array}{r} 45 \text{ r } 1 \\ \hline 11 \quad | \quad 496 \\ - 440 \quad (40 \times 11) \\ \hline 56 \\ - 55 \quad (5 \times 11) \\ \hline 1 \text{ (remainder)} \end{array}$$

Multiples of the divisor (11) have been subtracted from the dividend (496)

'40 (lots of 11) + 5 (lots of 11) = 45 (lots of 11)'

'1 is the remainder'

Answer: $45 \frac{1}{11}$

High Ercall Primary School Progression in Division.

Standard short division does not help with the following calculation. However, it can be solved using long division ‘chunking’ (by repeated subtraction using multiples of the divisor):

$$144 \div 16 = 9$$

$$\begin{array}{r}
 & & 9 \\
 16 & \overline{)1\,4\,4} \\
 -6\,4 & \hline
 8\,0 \\
 -6\,4 & \hline
 1\,6 \\
 -1\,6 & \hline
 \end{array}$$

$-6\,4$ (4×16)
 $-6\,4$ (4×16)
 $-1\,6$ (1×16)

Multiples of the divisor (16) have been subtracted from the dividend (144)

‘4 (lots of 16) + 4 (lots of 16) + 1 (lot of 16) = 9 (lots of 16)’

‘There is no remainder’

Children will need to select the most effective method for each calculation/problem they meet, including whether to use the standard, **formal written method of long division**:

$$432 \div 15 = 28 \text{ r}12$$

$$\begin{array}{r}
 & & 2\,8 \text{ r}12 \\
 15 & \overline{)4\,3\,2} \\
 3\,0\,0 & \hline
 1\,3\,2 \\
 1\,2\,0 & \hline
 1\,2 \text{ (remainder)}
 \end{array}$$

$3\,0\,0$ (20×15)
 $1\,2\,0$ (8×15)

Multiples of the divisor (15) have been subtracted from the dividend (432)

‘ 20 (lots of 15) + 8 (lots of 15) = 28

12 is the remainder’

The remainder can also be expressed as a fraction, $\frac{12}{15}$ (the remainder divided by the divisor) or as a decimal, 0.8 (see next example)

The answer is: $28 \frac{12}{15}$ or 28.8

This is an alternative way of recording formal long division:

$$432 \div 15 = 28.8$$

$$\begin{array}{r} 28.8 \\ \hline 15 \left| 432.0 \right. \\ \quad 30 \downarrow \\ \quad 132 \\ \quad 120 \downarrow \\ \quad 120 \\ \hline \quad 0 \end{array}$$

NB Only teach this method when children are completely secure with the previous method.

The remainder is expressed as a decimal.

Continue to practise the **formal method of short division**, with and without remainders, using the language of place value to ensure understanding (see Y5 guidance).

$$496 \div 11 = 45 \text{ r } 1$$

$$\begin{array}{r} 45 \text{ r } 1 \\ \hline 11 \left| 4956 \right. \end{array}$$

The remainder can also be expressed as a fraction, $\frac{1}{11}$ (the remainder divided by the divisor)

NB If, at any time, children are making significant errors, return to the previous stage in calculation.

Our aim is that by the end of Y6 children use mental methods (with jottings) when appropriate, but for calculations that they cannot do in their heads, they use an efficient formal written method accurately and with confidence.
